

ABSTRACT OF THE DISCLOSURE

A system for conducting fortune telling and character analysis over Internet based on an entered name of any language is provided. The system includes a host, a database, one or more terminals, and a communicating system connecting the host, the database and the terminal to one another. The database is capable of analyzing implied meanings of names of any language entered at the terminal in accordance with traditional Chinese fortune telling theories and thereby providing judgments on good or bad signs possibly represented by the entered names. The implied meanings of names are obtained either from numbers of strokes of the entered names or from meanings or origins of words constituting the entered names.
